

15" LCD Weather Display

View the latest live, local current conditions, forecast, animated Doppler radar and more on your very own personal weather display. The LCD Weather Display offers a window into the world around you by providing data from your club and quick access to important real-time weather data, including:

- Current Conditions
- 3-Day Forecast
- Live Camera Images
- Doppler Radar
- Local Weather Alerts

The bright 15" screen makes it easy to view weather data and alerts from a distance, so it's perfect for a pro shop, club house, common areas or any environment where staying in-the-know is of critical importance. In addition to being wall-mountable, these displays come with a desktop stand, offering a variety of display scenarios to maximize visibility.

All displays arrive pre-configured so getting it up and running is a breeze: simply connect to a local network* via the built-in Ethernet port or WiFi. It is recommended that the Ethernet port be used for alerting purposes.

* Existing internet connection required.

SPECIFICATIONS	
Screen	15" flat panel LCD
Input	Remote control
Aspect Ratio	4:3
Resolution	1024x768
Processor	Telechip 8900
DSP Type	ARM 32-bit
